CARETREAT AWP AF

Water-dispersible, highly effective antifoam for application in a wide temperature and pH range.

- Economic in use
- Long term activity
- Direct acting
- Easily biodegradable

DESCRIPTION

Caretreat AWP AF is a water-dispersible antifoam based on a modified activated siloxane polymer. Caretreat AWP AF has a high efficiency and can be used over a wider temperature and pH range than conventional antifoam. Caretreat AWP AF has been carefully formulated for optimal stability, especially at high temperatures, in order to avoid siloxane precipitation. The selected chain lengths and molecular weight ensures an optimum defoaming effect and prevents foam built-up.

ADVANTAGE

- Can be applied in as well hot as cold water
- Defoams immediately
- Remains active for a long time
- Chemically inert product, resistant to chemical attack

APPLICATIONS / DIRECTIONS FOR USE

Caretreat AWP AF has to be used undiluted for maximum efficiency. Experimental trial is the best way to determine the optimal dosage of the product. Generally the optimal AWP AF dosage is between 10 and 100 ppm according to the application and to the stability of the foam. Caretreat AWP AF can be diluted in either hot or cold water to obtain a better dispensability in the foaming medium, but the efficiency of the AWP AF will be affected. In case of dilution we recommend not to exceed a dilution ratio of 1:10. The diluted product must be used immediately.

Revision	0.0	Document number	PDS-08-205
Date of issue	01-11-2019	Page	1 of 2

DOSAGE

See Applications / Direction for use.

PROPERTIES

pH (1 % solution)	7 - 8
Density	0,98 g/cm ³
Flashpoint	Not applicable
Physical state	White emulsion

APPROVALS

N/A

For detailed information on safety and health, please refer to the Material Safety Data Sheet MSDS and/or product label.
